01 Logo Dynamics

Logo Overview

The GSMA Intelligence logo is a very valuable asset. It's the most visible element of our identity and our global signature used across all communications, so we need to treat it right.

01 Logo Dynamics

GSMA™
Intelligence

Primary
Logo

- The logo’s primary colours are solid Black and Pantone 185 C.
- The full colour logo is available in various formats and file types.
- Use the file type that is best suited to the media being used.
- Use CMYK files for printed materials and RGB files for digital media.

01 Logo Dynamics

Clear Space

Our logo should always be surrounded by an area of clear space. The minimum amount of clear space is equal to the letter 'g' within the logo.

01 Logo Dynamics

Intelligent Tagline

Our tagline defines
our primary focus as
a data intelligence
company.

01 Tagline

02 Brand Colours

Primary Colours

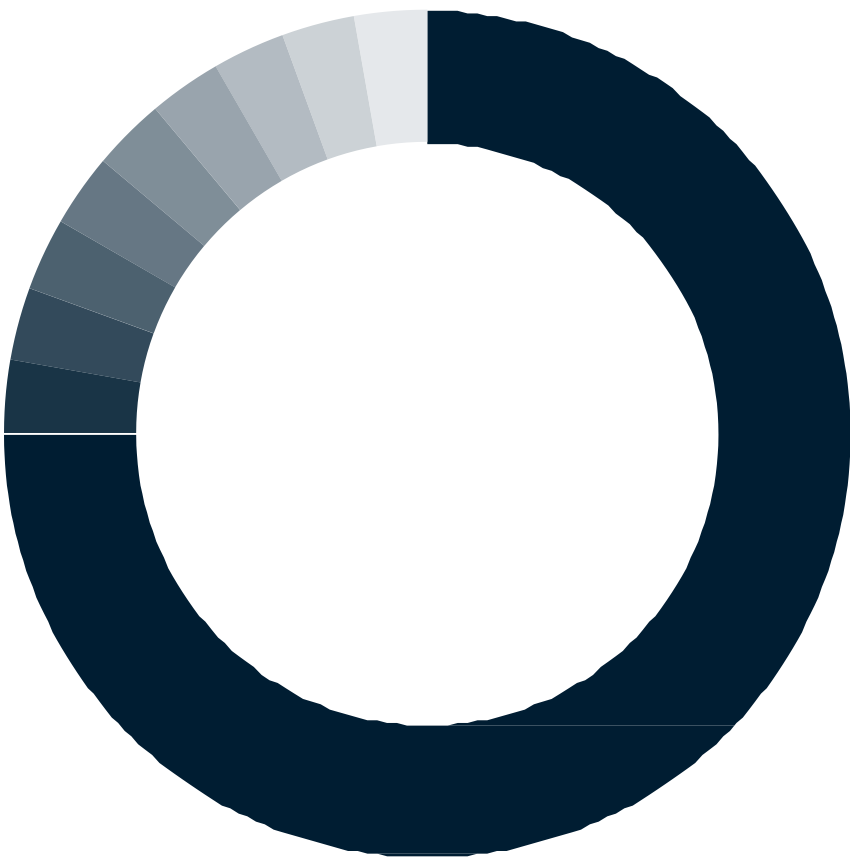

Our colour palette is recognisable and works on both dark and light layouts, allowing key messages and data to be communicated clearly.

Usage of Intelligent Turquoise is strictly limited. This brand colour may only be used as a highlight colour alongside Intelligent Navy.

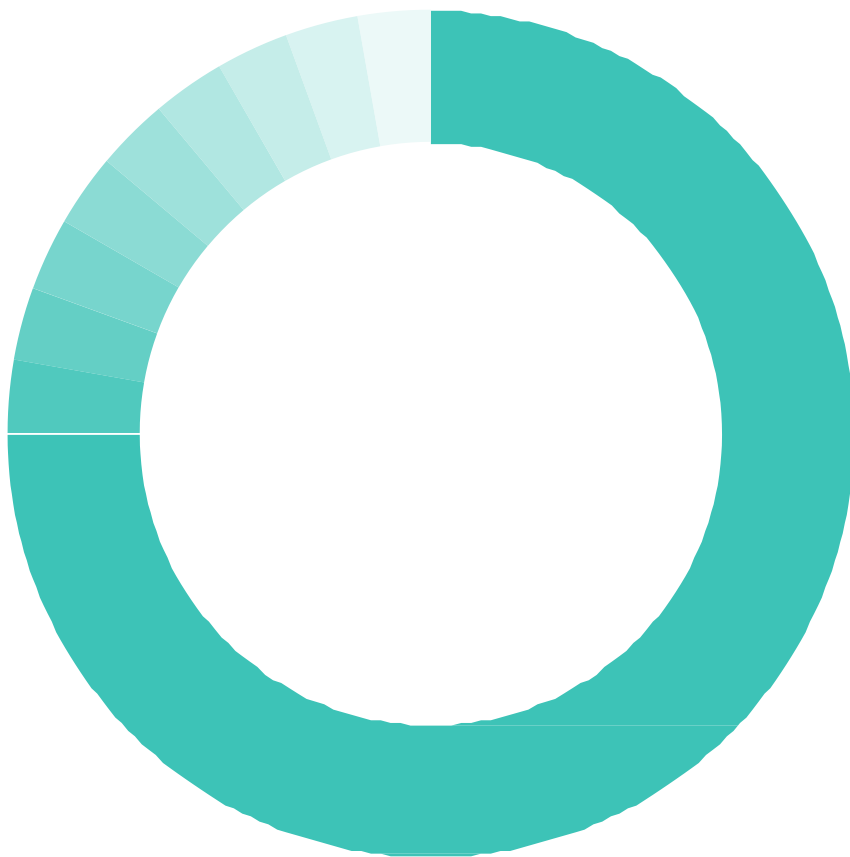

02 Brand Colours

	GSMA Red
CMYK	C0 M100 Y100 K0

03 Typography

Primary Typeface

Gotham is clean, modern and easy to read, and used throughout all GSMA intelligence corporate material. The many versions and weights of Gotham allow our materials to be either bold and strong or quieter and restrained.

Gotham should be used for all body copy and sub-headings

07 Writing Style

Editorial Guide

- This style guide is designed to maintain the consistency and quality of our written materials.

07 Writing Style

Editorial excellence at GSMA Intelligence

Our style puts the reader first

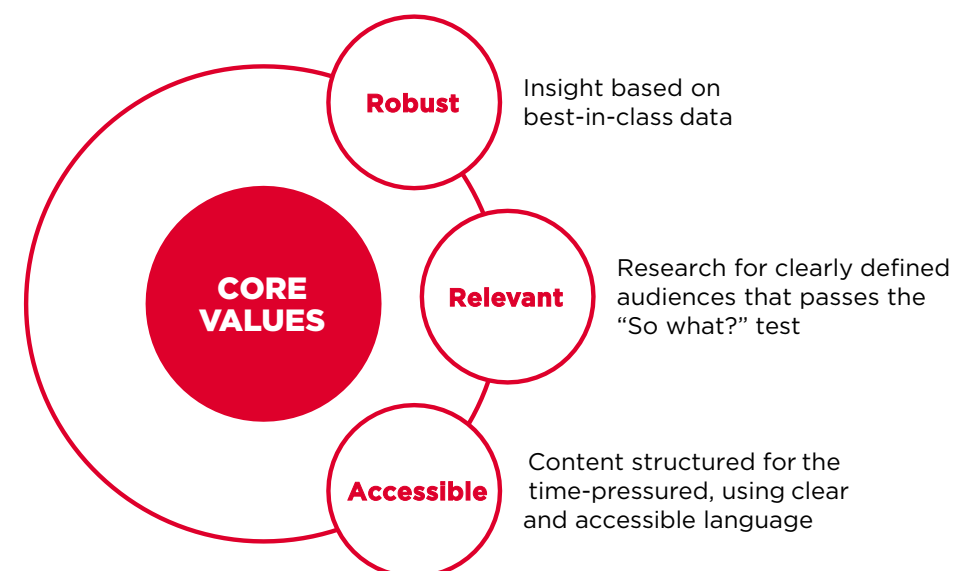

We must convey our messages in a way that is unambiguous, easy to read and empowering for our clients. The style decisions are all driven by a focus on our readers, enabling them to quickly find, understand and act upon analysis relevant to their needs.

Developing familiarity is good business

If we make GSMA Intelligence content both accessible and familiar, our clients will come back to our reports time and again. We can all encourage this familiarity and accessibility by following the house style points set out in the Editorial guide.

Clients sweat the small stuff

Some of the points in the guide may seem picky, but small inaccuracies and inconsistencies add up and provoke our readers to question the accuracy and robustness of wider research processes and analysis at GSMA Intelligence.

A direct, pyramid style of writing

Use headings to convey key messages

To enable clients to access key points quickly, use headings to highlight the key research conclusions or messages.

Structure paragraphs and sections with the most important information first

Don't make readers work for your analysis. Start with strength. Bring your key conclusions and statements to the top of paragraphs and sections. Then follow with detail and supporting statements. If you cut from the bottom, you should be cutting the least important information. The reality is that many readers won't reach the end of a report.

UK English with a neutral idiom

Use UK English spelling and punctuation

Ensure your Microsoft Office software is set to English (UK) as the language preference.

Aim for neutral/global vocabulary

Where possible, avoid words or phrases that are specific to certain cultures and geographies and could therefore exclude others:

- Use specific time periods rather than seasons (e.g. fourth quarter rather than winter).
- Avoid parochial references (e.g. this country, our network coverage).
- Avoid sporting phrases/metaphors (e.g. hit for six, step up to the plate).

Be aware of words that can have different meanings in UK/US English.
